

ES CABINETS

FUTURE-PROOF PLATFORM THAT ADVANCES WITH THE SHIFTING NEEDS OF CRITICAL INFRASTRUCTURE

Integrated features and optional accessories make the ES from Great Lakes the most versatile cabinet capable of supporting shifting critical infrastructure: **power, airflow, cable management, and security.** We call it a Future-Proof cabinet—a single platform that grows with the evolving needs of any data center or computer room.

ES Cabinets—the most fast, flexible, and easy solution to support data center needs.

FAST: Choose from 16 in-stock sizes, STACK (integrate) the ES with accessories and the entire cabinet ships in 24-48 hours

FLEXIBLE: Pick popular configurations or configure a cabinet with the doors, sides, and tops that you want—3,000+ variations

EASY: Hundreds of mounting points throughout the cabinet to install, reposition, and reconfigure accessories

SUPERIOR STRENGTH: A fully welded frame and 12 gauge mounting rails support a max static weight capacity of 4000 lbs. (3300 UL rating)

POPULAR ES CONFIGURATIONS

Height	Width	Depth	Color	Configuration	Example
GLXXXES-	XX	XX-	X-	XX	Configured ES cabinet
980 (52U, 98")	24	42	B (Black)	MS (Mesh contour front/rear)	GL840ES-2442-B-MS
910 (48U, 91")	30	48	W (White)	MSS (Mesh contour front/split mesh)	
840 (44U, 84")	32²				
790 (42U, 49")					
480 (24U, 48") ¹					

Note: ¹48"H available in 24" W x 42"D only; ²32" width available in 84" height only

COMPLETE CABINET INCLUDES: Welded frame with two pair of 19" EIA, 3/8" sq. (M6) mounting rails (with RMU markings and FMP), two pair of PDU brackets, pair of solid side panels, solid top panel, front and rear door as configured (each with a locking handle) and 2.5" levelers; UL2416

ES AIRFLOW

VERSATILE ACCESSORIES TO SUPPORT AIRFLOW AT THE CABINET LEVEL AND THROUGHOUT THE DATA CENTER

Flexible and scalable accessories for the ES address airflow at the cabinet level and throughout the data center. Implement best practices in the cabinet by using simple accessories to reduce bypass airflow and exhaust recirculation. Efficient airflow in the cabinet lends itself to an improved data center strategy that utilizes localized containment or hot aisle/cold aisle solutions—all designed with containment products that are built-to-order to ensure the best fit, function, and installation.

STACK the ES—free integration of filler panels, brush grommet, etc!

ESTABLISH BEST PRACTICES

Install basic accessories that support data center best practices—fill gaps in and around the cabinet to segregate conditioned air and exhaust

CONFIGURE FOR EVOLVING NEEDS

Choose doors and top panels that support a desired airflow strategy; configure at the time of order, or quickly swap parts in the field to support changing needs

BUILD FOR EFFICEINCY

Determine an airflow strategy—localized or aisle containment—and choose from several aisle door and overhead options to support the strategy

ES INTERNAL CABLE MANAGEMENT

FLEXIBLE PRODUCT AND DESIGNS THAT PROVIDE INFINITE CABLE MANAGEMENT OPTIONS

The ES cabinet accept vertical, horizontal, and unique accessories that support best practices related to telecommunications and ICT cabling infrastructure. Determine which accessories are needed at the time of ordering an ES cabinet and Great Lakes will install all accessories where specified. Once onsite, relocation and adjustment of accessories, if needed, is fast and easy

STACK the ES—free integration of internal cable management products!

ARRANGE & ADJUST ACCESSORIES

Mount cable fingers, rings, posts, cinch straps, and EIA brackets along the FMP, hundreds of mounting points made for quick installation, adjustment, and upgrade of accessories

MANAGE CABLES IN ALL DIRECTIONS

Facilitate proper cable installation and maintenance by separating and organizing pathways throughout the cabinet—install vertical and horizontal accessories exactly where needed

BOOST AIRFLOW EFFICIENCY

Clean and tidy bundles, combined with products like brush grommet, boost airflow efficiency and create the best operating environment for infrastructure and rack mount equipment

ES EXTERNAL CABLE MANAGEMENT

FULLY WELDED CABINET CAPABLE OF SELF-SUPPORTING HIGH DENSITY CABLE BUNDLES

Ladder Rack Bracket
Height adjustable LRB; use on cabinets of various heights

Waterfall Ladder Rack Bracket
3" bend radius helps maintain proper cable standards

Top Cable Trough
No ladder rack or overhead building changes needed

Side Car
Improve airflow in the cabinet and create better network installations by moving cable bundles to the side car — a dedicated space for cable management and power

External cable management accessories attach to the ES cabinet to create a dedicated space outside of the cabinet for improved cable infrastructure.

The fully welded ES frame is capable of self-supporting high density cable bundles across the top of cabinets—no need to suspend hardware and make overhead infrastructure changes to the building.

Quickly and economically manage overhead cables with as little as one part number.

ATTACH OVERHEAD TROUGHS

Top cable troughs install on the ES with 4 screws and provide a quick and easy means to support overhead cables

UTILIZE RUNWAY & BASKET TRAY

Multiple styles of ladder rack brackets support cable runway and basket tray across data center cabinets and aisle rows

ORGANIZE CABLES & IMPROVE AIRFLOW

Relocate cables to the side car to eliminate large bundles in the cabinet—airflow now has an unobstructed path to enter equipment inlets and exhaust does not build up in the cabinet rear

ES PHYSICAL SECURITY

A NEARLY IMPENETRABLE LAYER OF PHYSICAL PROTECTION AROUND RACK MOUNT EQUIPMENT

SEAL Cabinets are the ultimate physical security solution to protect rack mount equipment against accidental and physical harm. SEAL begins with an ES frame that is integrated with high-quality metal components and sophisticated electronic access control. Choose the complete SEAL cabinet or incorporate the accessories that create the optimal degree of physical protection for any situation.

INTEGRATE ACCESS CONTROL

Single and multi-factor access options provide IT managers control and oversight into activity surrounding a cabinet—who, what, when, and where

ELIMINATE POINTS OF VULNERABILITY

Install accessories specifically designed to delay and deter points of unauthorized access and tampering: tamper resistant panels, gland plates, brackets to conceal sensitive hardware, etc.

UPGRADE & REMAIN COMPLIANT

Integrate access control and accessories that promote compliance with specific industry regulations (HIPAA, FISMA, etc.) designed to protect physical assets and sensitive information
